The **PLASMAR +** project has its origin in the results obtained in the previous PLASMAR project. Both projects cover the entire process related to the Maritime Spatial Planning (MSP). The purpose of the PLASMAR + project is to promote MSP process by developing new tools based on scientific and technological knowledge within the framework of blue growth.

The projects' activities will focus on the coastal and marine waters of the Azores, Madeira and the Canary Islands, finalizing activities by the end of 2022.

The project partners are the following competent administrations and research entities:

Secretaria Regional de Mar e Pescas  
Direção Regional do Mar
